## CLOUD MIGRATION | THE FUTURE IS CLOUD

Our deep understanding of industry issues, together with the innovation engine that is AWS, forms a unique combination of global business transformation experience and market-leading technology that help you drive maximum value and impact with business solutions that build tomorrow's innovations.

## OUR CAPABILITY

With years of transformation experience, we understand that success requires equal focus on technology, the skillsets of your people, and operational shifts that address key stakeholder needs. We help you achieve this balanced focus so you can reduce time to market for your new products, offering & generate the value your executives expect.

Our relationship handles the minutiae behind the scenes, freeing you up to focus on your business. And we work alongside you all the way, so you can drive your innovations into the future and realize what matters most: real-world impact.

## OUR INTEGRATED OFFERINGS

### Cloud Migration

Modernize your applications to reduce operational costs and innovate in impactful ways for a sustainable future.

### Mainframe Migration

Transform your enterprise workloads and accelerate your modernization journey with future-ready technology.

### Business Presentation

### Mitigating Concerns

### Engagement

### Aligned Consulting

### Resolution and Support

## USE CASES

Projects Executed	Project Scope Requirements
Business Continuity on AWS	The client was interested in understanding the AWS economics & wanted to optimize operations cost while ensuring optimal performance of their information technology systems.
SAP on AWS	The client wanted to conduct a thorough proof of concept of hosting their ERP on AWS
Customer Experience Portal with mobility and Artificial Intelligence	The client wanted to create a customer experience platform which provided 360-degree integrated information platform for their subscribers which increases customer satisfaction and minimizes drop-outs.
AWS Work-Spaces	The client was exploring desktop-as-a-service to optimize their own client computing operations for which we positioned AWS WorkSpace to meet this requirement.
Backup with Disaster Recovery on AWS	The client wanted hands-on experience on cloud and we decided to propose a DR & data backup solution on AWS platform.
Consultancy Service-MAP	The client asked us to do a thorough analysis of their environment & we conducted an Optimization & Licensing assessment
Data Center Transformation on AWS	The customer asked to provide consultancy, design, deployment & post implementation managed services to transform from on premise to AWS.
Digital Transformation to AWS	The customer wanted technical solution design, migration plan and consultancy to host their financial application over AWS to reduce latency
Enhanced security on AWS	The customer approached us as the wanted to learn & test the credibility of AWS security
