

AGILITY | ENTERPRISE SECURITY

.....

The cloud does not mean that security problems are eliminated. Cloud services are as vulnerable to security breaches as on-premises systems. A company's popularity can be seen as an opportunity to steal information and resources from users. A company's data is its most valuable asset, and security is of paramount importance.

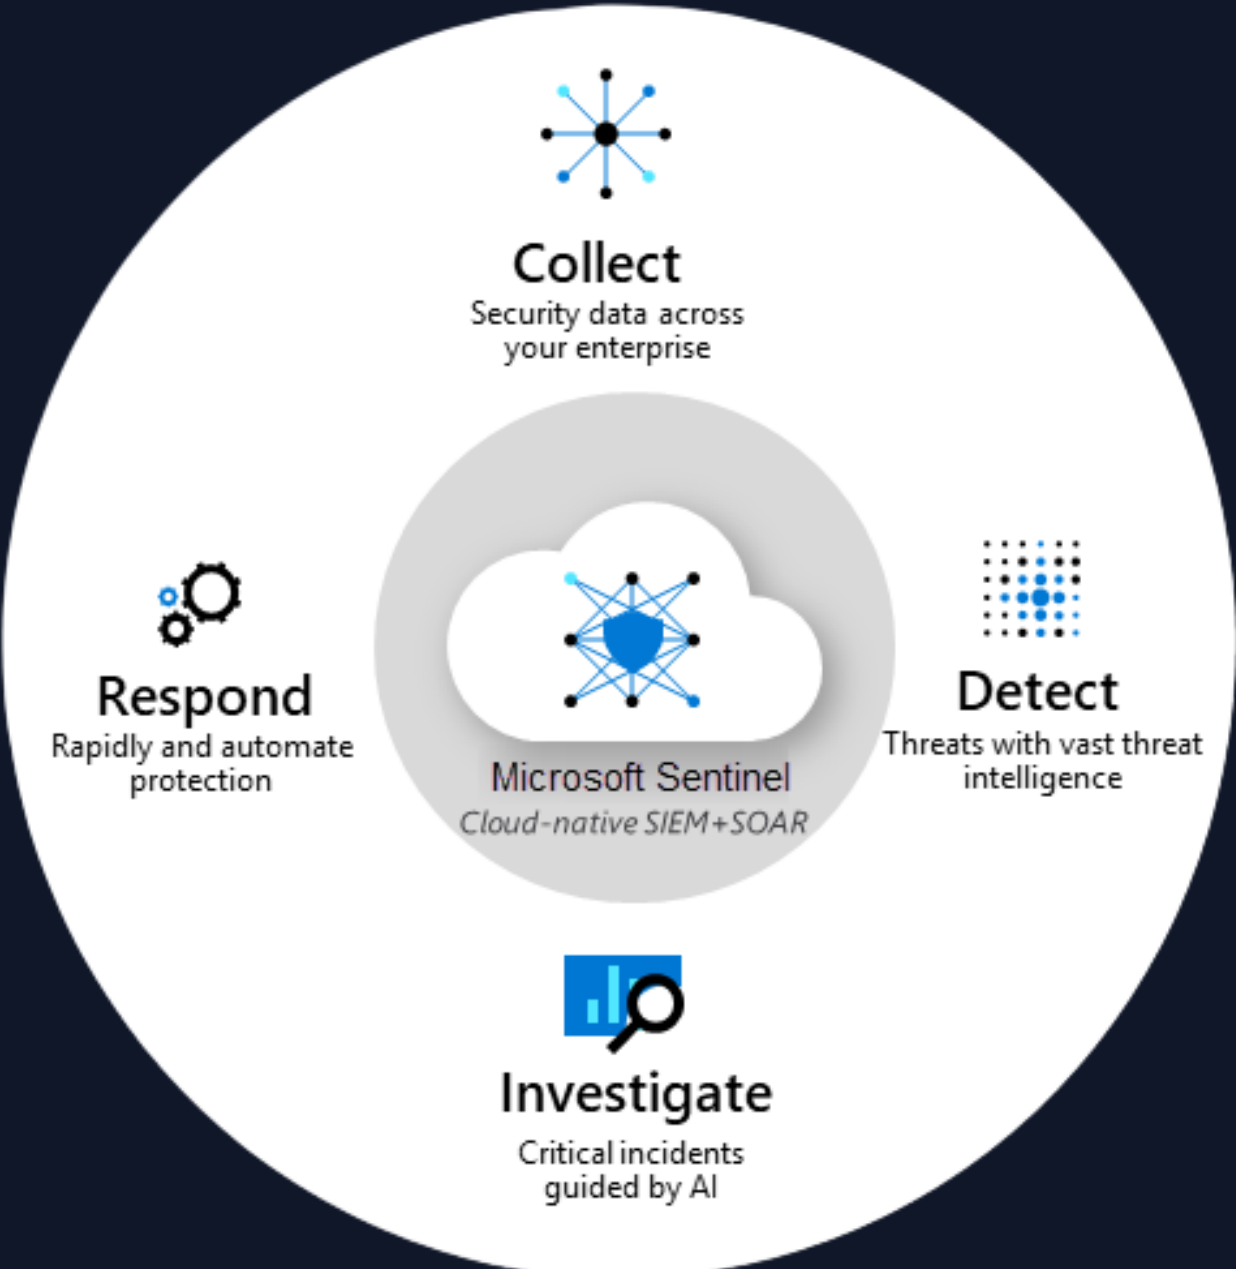

Intelligent security for your entire enterprise

Maintain and streamline compliance while strengthening your system's defenses. Based on our deep understanding of zero-trust architectures, defense-in-depth best practices, and the specific needs of critical infrastructure, we design systems and solutions for all industries. Implement a layered defense model with our security professionals to ensure the right technologies are applied at the appropriate layers.

Security in cloud

Microsoft Azure Sentinel is an intelligent, next-generation security information and event management (SIEM) solution designed to detect threat anomalies. Azure Sentinel is also categorized as a security orchestration automated response (SOAR) service that expedites the incident detection and event response process for cybersecurity teams. Azure Sentinel provides an extra layer of security to protect critical resources across an organization.

Key features

Customers can easily discover packaged content and integrations that deliver value for a product, domain, or vertical within Azure Sentinel.

The providers or partners can deliver the combined product, domain, or vertical value using solutions in Azure Sentinel and also productize investments.

Customers can easily deploy content in a single step and optionally enable content to get started immediately.

Match for all your tools

.....

Optimize for your needs by bringing your own insights, tailored detections, machine learning models, and threat intelligence.

Using [Microsoft Azure Sentinel](#), teams can better respond to incidents across resources by combining threat intelligence with automated alert orchestration. Security investigators can always stay on top of sophisticated cyber threats as they emerge and happen with a [cloud-native SIEM solution](#).
